

PLASTHANE "V-PLOW"

Plasthane urethane "V-Plow" gives an efficient and long lasting cleaning of the return side of conveyor belt.

This scrapper is used to clean particules stuck on the top of the return belt. Usually installed in front of the tail conveyor pulley and ideally behind the conveyor loading point.

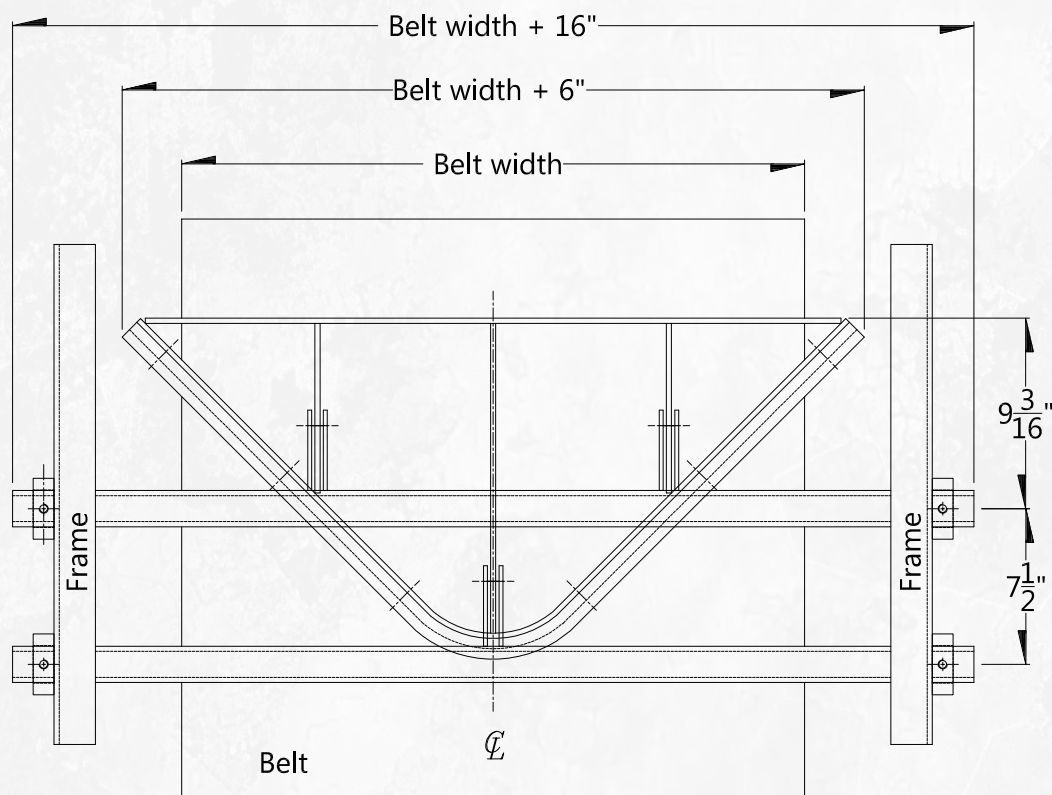

Sold with our sturdy support system giving pressure by gravity. It's pivots system will keep the v-plow in it's perfect position for high efficiency and smooth running. All the tensionner parts are powder coated for an extended life of the system.

Shall be installed perpendicularly to the belt

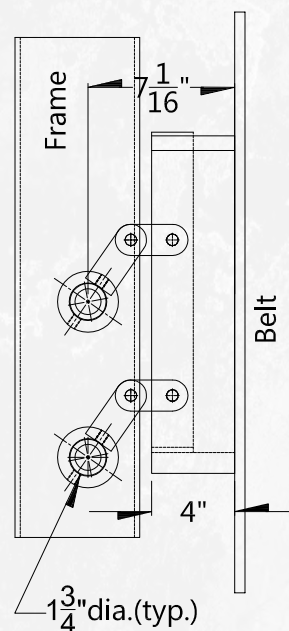

The urethane is easy to change by the use of bolted clamps.

Available for different belt widths from 18 to 84 inches
